

Fresh-Cut Tree Care

After bringing your tree home, we recommend making a 1 to 2-inch cut off the bottom of the tree stump with a small handsaw. This fresh cut will allow your tree to drink water easier. Submerge the tree in a tree stand filled with water. Check water level each morning and evening. Your tree will want a lot of water the first 2-3 days. Check once a day after that. Be sure to keep your tree away from any heat source.
